**Amardip S. Bhuller, M.D.**
PLASTIC, RECONSTRUCTIVE AND COSMETIC SURGEON
CREIGHTON MEDICAL ASSOCIATES

**BREAST AND BODY SCULPTING**

**TUMMY TUCK** can be combined with other cosmetic procedures such as liposuction, breast augmentation or breast reduction surgery.

**BREAST AUGMENTATION OR ENHANCEMENT** can dramatically improve the appearance of a woman’s breasts by enlarging small breasts, underdeveloped breasts, and breasts that have decreased in size.

**BREAST LIFT** can be completed alone or in combination with implants to increase firmness and size.

**BREAST REDUCTIONS** minimize the amount of weight, which can alleviate back pain, shoulder strap creases, hand numbness and breathing problems.

**LIPOSUCTION** removes the unwanted fat out of specific areas to shape your body the way you want. After the procedure, you should be back to work within a few days.

**BODY CONTOURING AFTER MASSIVE WEIGHT LOSS:** Following surgical or nonsurgical weight loss, massive weight loss in a short period of time can create folds of redundant skin that may not shrink back to the former shape. These folds are common in the abdomen, waist, legs, arms, breast and neck areas. Plastic surgery can help refine these problem areas, such as an abdominoplasty (tightens loose skin around the abdomen and back), body lift surgery (lifts the entire lower body), thigh and/or arm lift (removes the extra skin on the upper legs and arms).

**FACIAL REJUVENATION**

**EYELID SURGERY** can improve drooping upper and lower eyelids by removing fat, muscle, and excess skin.

**BOTOX** is the most common treatment of frown lines, forehead creases, “crow’s feet,” and lines and wrinkles of the lower face.

**SCULPTRA** is used for restoration and/or correction of the signs of facial fat loss.

**RESTYLANE** is a cosmetic dermal filler that replaces lost volume and restore youthful contours to the skin, such as the lines from your nose to the corners of your mouth.

**FACIAL FillERS (OR FAT) INJECTIONS** are used for plumping up creased, furrowed or sunken facial skin. Collagen can also be injected into the lips to create fuller, plumper lips and reduce fine wrinkles around the mouth.

**FACELIFTS** can be completed alone, or in conjunction with a forehead lift, eyelid surgery or nose reshaping. For selected individuals, a face lift can be performed endoscopically, which eliminates the traditional incision along or in the hair line.

**NOSE SURGERY** can decrease or enlarge your nose size, correct a birth defect or injury, or relieve some breathing problems. After surgery, most individuals are able to be up and about within two days and able to return to school or sedentary work in about a week.

**DERMABRASION** smoothes acne-scarred skin and the fine facial wrinkles, such as those around the mouth. After several weeks, you can begin gradually resuming your normal activities.

**CHEMICAL PEEL WITH EXFOLIATION** improves blemishes, wrinkles and inconsistent skin color by removing the outer layers of the damaged facial skin.

---

Amardip S. Bhuller, M.D., is a skillful and accomplished plastic, reconstructive and cosmetic surgeon. He is a member of the American Society of Plastic Surgeons (ASPS), and is board certified by both the American Board of Plastic Surgery and the American Board of Surgery. Dr. Bhuller completed surgical training at Indiana University Hospital and plastic surgery training at the prestigious Cleveland Clinic Foundation in Ohio.

Creighton offers the medical expertise of those teaching tomorrow’s physicians, which requires our professional staff to be current with cutting edge technologies and procedures. Dr. Bhuller is a skilful physician with experience ranging from the most complex facial trauma surgeries to the more common plastic and cosmetic procedures.
