Vital Signs Updates

11.2 Changes and Enhancements

Creighton Medical Associates
In the Vital Signs panel for patients 3 years and younger, there is a new option to exclude vital signs from the normative growth charts. So if a child is sick and has lost weight, you have the option to remove it from the trending in the graphs. This option is available from Order Details and the context menu in the Vital Signs component.

For additional support contact: 280-3510 option #1, cmasupport@creighton.edu, or www.creighton.edu/ehr
If Height and/or Weight are entered in error, the BMI/BSA also becomes entered in error. The other values remain valid though.

Here, you can see the Weight has been entered in error. Therefore, the BMI/BSA is removed. However, the Height is still valid.
