Purpose
The purpose of this lecture is to inform faculty, fellows, residents, students and other healthcare professionals of the pathogenesis of liver disease associated with alcohol ingestion, the basic aspects of alcohol metabolism, the mechanisms that may be responsible for the development of hepatic disease and the factors that determine the frequency with which alcohol abuse leads to liver disease.

Objectives
At the end of this lecture, the participant should be able to:
- Describe the pathogenesis of alcoholic liver disease
- Determine how much an individual can safely drink without incurring lasting liver injury
- Discuss the treatment of alcoholic hepatitis
- Identify the important consequences of cirrhosis

Michael F. Sorrell, MD
Dr. Sorrell is a graduate of the University of Nebraska, Lincoln and the University of Nebraska College of Medicine, Omaha. He completed residencies in Internal Medicine and Gastroenterology, and he was a National Institute of Health trainee in Hepatic Disease and Nutrition at the New Jersey College of Medicine and Dentistry, Newark.

Dr. Sorrell was Chairman of the Department of Internal Medicine at the University of Nebraska. He is a fellow of the American College of Physicians, member of Alpha Omega Alpha and the Association of Professors of Medicine, Past President of the American Association for the Study of Liver Disease and Past President of the International Liver Transplant Society.

Dr. Sorrell has written over 220 peer-reviewed publications, multiple editorials and book chapters and seven books.

Disclosure:
Dr. Sorrell has listed no financial interest/arrangement that would be considered a conflict of interest.
