NPUAP’s 2013 Conference will feature TWO concurrent tracks:

BEST PRACTICE & CONSENSUS

Plan now to participate with international leaders in the field of pressure ulcers!

This conference is jointly sponsored with Creighton University School of Medicine, provider of continuing medical and nursing education.
Dear Colleague,

Please join us for the 13th NPUAP Biennial Conference. This state-of-the-art conference has two tracks: Best Practice and Consensus. You can choose the track that matches your learning needs and goals.

- The **Best Practice** Track will examine critical issues for clinicians involved in pressure ulcer prevention and treatment. These issues are oriented toward practitioners and will be examined in light of the latest evidence.

- The **Consensus** Track is intended for professionals with substantive experience in evaluation of suspected deep tissue injury. NPUAP is particularly interested in input from those clinicians who have responsibility for and experience with assuring accurate assessment and documentation of pressure-related skin injuries.

Many people have found that bringing a colleague allows each attendee from your institution to attend a different session and share the information more readily. Take advantage of our reduced registration fees for multiple professionals attending from one institution!

We look forward to seeing you in February 2013 in The Woodlands (Houston), Texas!

The NPUAP Education Committee & Conference Planning Committee Co-chairs:

- **Mona Baharestani**, PhD, APN, CWON, CWOC
  Johnson City, TN
- **Barbara Braden**, PhD, RN, FAAN
  Omaha, NE
- **Joyce Black**, PhD, RN, CWOCN, CPSN
  Omaha, NE
- **Mary Sieggreen**, MSN, CNS, NP, CVN
  Detroit, MI

**CONFERENCE OBJECTIVES:**

At the conclusion of the NPUAP 13th National Biennial Conference, participants will be able to:

1. Differentiate various types and severity of skin and deep tissue injuries (pressure ulcers, suspected deep tissue injury, diabetic foot ulcers)
2. Devise plans of care for prevention of various types of skin and deep tissue injuries and concomitant complications
3. Devise plans of care for treatment of various types of skin and deep tissue injuries and concomitant complications
4. Examine new evidence in etiology, external manifestation and natural history of deep tissue injuries for potential application to clinical practice.
