Creighton University is seeking healthy volunteers for a new 10-week research study looking at how two different blood pressure medications may affect the function of platelets (cells in the blood that help with clotting).

To be eligible to participate in this study, you must be:

- 19 years of age or older
- A non-smoker
- Not currently taking any routinely scheduled prescription or over-the-counter medications or herbal supplements.

Volunteers cannot be:

- Pregnant or planning to become pregnant during the study period
- Breastfeeding
- Using anti-platelet agents, NSAID medications, or herbal supplements within 7 days of the study period and for the duration of the study.

Additional Study Details

Pre-Visit Requirements:

- Volunteers must refrain from nicotine, caffeine, food and exercise for 8 hours prior to four of the visits.

Enrolled volunteers will receive:

- A $50 stipend for time and travel for each of 7 visits
- Blood draws to determine platelet function
- Blood pressure and heart rate measurement results
- Basic metabolic profile laboratory results
