Piero Anversa, M.D., FAHA, is a professor of anesthesia and director of the Center for Regenerative Medicine at Brigham & Women’s Hospital at Harvard Medical School. Dr. Anversa is appointed as an adjunct professor of medicine and a visiting assistant professor of pathology at New York Medical College, and has additional appointments at Albert Einstein College of Medicine, San Diego State University, and the Division of Cardiology at the University of Rome.

Dr. Anversa received his M.D. degree from the University of Parma, Italy, and subsequently joined New York Medical College as a professor of medicine in microbiology and pathology. During his 30-plus years at New York Medical College, Dr. Anversa dedicated his career to identifying and studying the potential of cardiac progenitor cells. Dr. Anversa’s work has completely revolutionized his field and the prospective treatments of myocardial damage resulting from myocardial infarction and heart failure. His current research is aimed at better understanding the origin and development of cardiac progenitor cells, their distribution and mechanisms of aging, the etiology of their death and senescence, and their therapeutic potential.

Dr. Anversa has been instrumental in advancing his field through his research publications which include over 300 journal articles and over 100 book chapters and reviews.
