PURPOSE
To promote continuity of care and patient safety in residents’ learning and working environment, the Accreditation Council for Graduate Medical Education (ACGME) requires that programs and sponsoring institutions minimize the number of patient care transitions, implement a structured and monitored handoff process, train residents for competency in handoffs, and make schedules readily available that list residents and attending physicians responsible for each patient's care. In addition to resident-to-resident patient transitions, residents must care for patients in an environment that maximizes effective communication among all individuals or teams with responsibility for patient care in the healthcare setting.

SCOPE
This policy applies to all Creighton University Obstetrics and Gynecology residents.

DEFINITIONS

- **Faculty**: Defined as individuals with a formal assignment by the residency program to teach resident/fellow physicians.

- **Transition of Care**: The process of relaying complete and accurate patient information between individuals or teams when transferring responsibility for patient care in the healthcare setting.

- **Interprofessional Team**: A team made up of physicians and other health professionals appropriate to delivery of care in the specialty. A team made up solely of physicians is not an interprofessional team. Teams may include residents, fellow, faculty, and other clinical support personnel such as nurses, Pharmacists, case workers, and dieticians.

POLICY
The program reviews call schedules annually to minimize transitions in patient care within the context of the other duty hour standards. Whenever possible, transitions in care occur at a uniform daily time to minimize confusion. Documentation of the process involved in arriving at the final schedule should be included in the minutes of the Program Evaluation Committee meeting.
A. The Obstetrics and Gynecology residency training program has a patient checklist with a documented process in place to assure complete and accurate resident-to-resident patient transitions.

The template includes:
   a. Patient name
   b. Age
   c. Room number
   d. ID Number
   e. Name and contact number of responsible resident and attending physician
   f. Pertinent diagnoses
   g. Pending laboratory and X-rays
   h. Overnight care issues with a "to do" list including follow up on laboratory and X-rays
   i. Other items depending upon the specialty.

B. There is a structured face-to-face, phone-to-phone, or secure intra-hospital electronic handoff that occurs with each patient care transition. This includes a brief review of each patient by the transferring and accepting residents with time for interactive questions. All communication and transfers of information are provided in a manner consistent with protecting patient confidentiality.

C. Our program is responsible for posting or clearly communicating its call schedule so that the entire health care team (attending physicians, residents, medical students, nurses, and other caregivers) know how to immediately reach the resident and attending physician responsible for an individual patient's care.

D. Our program is responsible for assuring that its residents are competent in communicating with all caregivers involved in the transitions of patient care. This includes members of effective interprofessional teams that are appropriate to the delivery of care as defined by the Obstetrics and Gynecology residency review committee. Methods of training to achieve competency include GME orientation sessions, annual review of the program-specific policy by the program director with the residents, departmental and GME conferences, and on-line training activities.

E. The program’s process for ensuring patients safety and continuity of care for urgent/emergent health care appointments should follow the same hand off process as for residents needing to leave due to excessive fatigue or illness or family emergency.

F. The program recognizes that many routine health care appointments need to occur during the work day. In recognition of the primacy of patient welfare in these situations and the impact on the program's other residents, residents needing time off for these appointments should give the program 5 days’ notice to their program.
## PROCEDURE

A. To evaluate the effectiveness of transitions, monitoring will be performed by the GMEC using information obtained from our program’s Internal Reviews and review of annual program meeting minutes for documentation that clinical assignments have been designed to minimize the number of transitions in patient care and that residents are serving as members of effective interprofessional teams.

B. The following items will be reviewed by the GMEC as part of scheduled Internal Reviews and program annual reports:
   a. Use of program-specific template patient lists at each hospital where residents train;
   b. Interviews of residents, nurses, and others to determine their knowledge of compliance with patient care transitions; and
   c. Monitoring by the program director to ensure that the number of daily patient care transitions is a minimum number.

C. Results of the program monitoring will be reported to the GME Committee at least annually. The GMEC will review elements of the hand-over process and make appropriate recommendations in order to continuously improve quality of care and patient safety. Repeated deficiencies will result in a more detailed monitoring review, which could result in direct intervention by the GMEC.
